Professional Summary

System Engineer with hands-on experience in cloud-native applications, Kubernetes orchestration, and real-time data processing systems. Strong background in full-stack development using the MERN stack and building scalable backend services. Experienced in production monitoring, incident handling, and system reliability engineering using enterprise tools. Passionate about integrating Generative AI, LLM-based solutions, and modern cloud platforms like Azure into real-world applications.

Professional Experience

System Engineer EveryOps Technologies, Bangalore

- Designed and supported real-time data streaming pipelines using Apache Flink for high-throughput processing.
- Deployed and managed containerized microservices using Kubernetes, ensuring scalability and fault tolerance.
- Monitored production systems using Dynatrace, proactively identifying performance bottlenecks and system failures.
- Reduced incident resolution time by actively managing alerts and troubleshooting issues via ServiceNow workflows.
- Collaborated with cross-functional teams using Slack for real-time incident communication and resolution.
- Worked with MongoDB for efficient storage and retrieval of large-scale structured and semi-structured data.
- Performed Root Cause Analysis (RCA) on production incidents and implemented preventive improvements.
- Supported CI/CD-related activities and contributed to improving deployment reliability and system uptime.

Technical Skills

Cloud & DevOps:
Microsoft Azure (VMs, Storage, VNets, NSG), Kubernetes, Cloud Deployment, CI/CD Concepts, Monitoring (Dynatrace), Incident Management (ServiceNow)

Programming & Backend:
Node.js, Express.js, REST API Development, JavaScript, Basic Python

Frontend Development:
React.js, HTML5, CSS3, Responsive UI Design

Data Engineering:
Apache Flink, Real-Time Data Streaming, MongoDB

Tools & Collaboration:
Slack, Git, VS Code

AI & Emerging Technologies:
Fundamentals of Generative AI, LLM concepts, Prompt Engineering basics, API-based AI integration (learning phase)

Projects

MERN Issue Tracking System

- Developed a scalable full-stack issue tracking system using MongoDB, Express.js, React.js, and Node.js.
- Designed RESTful APIs to manage issue lifecycle including creation, assignment, prioritization, and tracking.
- Implemented secure authentication and authorization using JWT and role-based access control.
- Built responsive UI components in React for seamless user interaction and dashboard visualization.
- Optimized backend performance for handling concurrent user requests efficiently.

Pregnancy Safety Band (IoT)

- Designed and developed an IoT-based wearable system for monitoring health parameters like BP and heart rate.
- Integrated sensors with microcontrollers (Arduino/ESP32) for real-time data acquisition.
- Implemented alert mechanisms using mobile notifications for emergency health conditions.
- Focused on real-time monitoring and improving safety for pregnant women using IoT technologies.

IoT Gas Cylinder Alert System

- Built a gas leakage detection system using sensors integrated with IoT modules.
- Enabled real-time alerting system to notify users during gas leakage incidents.
- Improved safety and early detection mechanisms for household environments.

Internships

Web Development Intern – STEMUP

- Developed full-stack web applications using MERN stack technologies.
- Designed and implemented REST APIs for scalable backend services.
- Integrated authentication mechanisms using JWT and improved application security.

IoT Intern – Contriver

- Built Smart Helmet system for accident detection and safety alerting.
- Contributed to development of a UV sterilization robot for automated disinfection.
- Worked with embedded systems and sensor integrations for real-time monitoring.

Education

Bachelor of Engineering (Electronics and Communication Engineering)
SJC Institute of Technology 2021 – 2025

Certifications

- Programming with Python – Simplilearn
- Full Stack Web Development (MERN) – StemUp
- Basics of Computer Networking – GreatLearning
- Sales Management – GreatLearning

Achievements

- Winner – National Level Project Competition (Anveshana 2025)
- Selected twice for Inter-State Competitions by Anveshana
- Founded LV TechGuides and mentored students in technology and development
- Organized multiple technical and non-technical events in college
- Successfully organized a 24-hour inter-college hackathon

Areas of Interest

Cloud Computing, DevOps, Data Engineering, Distributed Systems, Full Stack Development, Generative AI, IoT Systems

Declaration

I hereby declare that the information provided above is true and correct to the best of my knowledge.
